

“Smart” Vacuum Cleaners

An Audit into The Security and Integrity of IoT Systems

Andrew Wong | UNSW Sydney

Introduction

Internet of Things (IoT) and Smart Home devices are everywhere.

Q: Can we completely trust a device's {security, privacy}?

A: no

We should always verify and test things where possible!

Introduction

Internet of Things (IoT) and Smart Home devices are everywhere.

Q: Can we completely trust a device's {security, privacy}?

A: no

We should always verify and test things where possible!

Introduction

Internet of Things (IoT) and Smart Home devices are everywhere.

Q: Can we completely trust a device's {security, privacy}?

A: no

- Developers are humans.
 - Humans make mistakes.
 - Developers make ~~mistakes~~ bugs
- Or maybe secret company agendas?

We should always verify and test things where possible!

Introduction

Internet of Things (IoT) and Smart Home devices are everywhere.

Q: Can we completely trust a device's {security, privacy}?

A: no

- Developers are humans.
 - Humans make mistakes.
 - Developers make ~~mistakes~~ bugs
- Or maybe secret company agendas?

We should always verify and test things where possible!

About Me

Andrew Wong

Computer Engineering @ UNSW Sydney

e: andrew.j.wong@student.unsw.edu.au

Interests

Making things, breaking things... mainly the latter

Background Information

Background Information

Widespread availability of IoT brands

The screenshot shows the AliExpress search results for "wifi lightbulb". The search bar at the top has a red border. Below it, there are five product cards displayed in a grid. Each card includes a blue box highlighting the "tuya" brand logo. The products listed are:

- 11.11 Tuya Smart WiFi LED Bulb E...**
AU \$35.58

- IoT manufacturers sell their products to vendors
 - The product itself
 - Cloud infrastructure
 - Smartphone application
- White-label vendors buy a generic product
 - Rebrand and sell products under their name

Vulnerabilities in IoT infrastructure

=

Vulnerability in all white-label products

Background Information

Centralisation and IoT Manufacturers as “Data Giants”

- Same IoT cloud infrastructure used by white-label vendors
- Data and network activity is all centralised / standardised
- Privacy concerns?
 - Who, What, Where, When, Why?

IoT infrastructure outage

=

Product-wide outage

- Reverse engineering of cloud communications protocols / API
 - e.g. MiO protocol ([link](#))
- Decoupling of devices from the necessity of internet / IoT cloud
 - HomeAssistant - Home Automation ([link](#))
 - OpenHAB - Home Automation ([link](#))
 - Valetudo - Cloud-less vacuum cleaner control interface ([link](#))
 - DustCloud - Xiaomi Cloud Emulation ([link](#))
 - MiCloudFaker - Xiaomi Cloud Emulation ([link](#))
 - tuya-convert - Flash Tuya devices to custom firmware ([link](#))

About The Company

- Robotic home cleaning appliances
- Founded in July 2014, Beijing
- Partnered with Xiaomi in September 2014
 - Investments + Partnership

- September 2016 - Mi Home Robotic Vacuum Cleaner
 - Very first product!
- : Roborock S5, E2, E3
- June 2019 - Roborock S6
- : Roborock S5 Max, S4, S6 Pure, S6 MaxV, E4, S4 Max
- January 2021 - S7

About The Device

Roborock S6 Vacuum Cleaner

Specifications

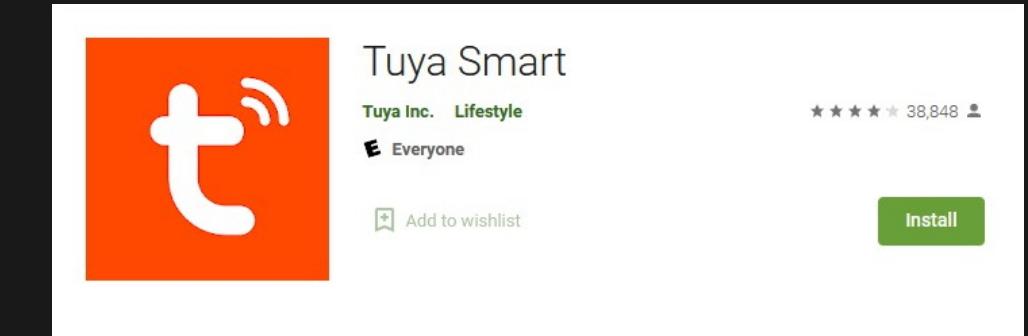

- CPU: Allwinner R16 Quad-core ARMv7
- ACU: STM32F103VC
- RAM: 512 MB
- Flash: 4 GB eMMC
- Wireless: RTL8189ETV (802.11 b/g/n)
- Cloud: Tuya / Xiaomi
- OS: Ubuntu 14.04

Cloud Capability

Roborock (Xiaomi Cloud)

Tuya Cloud

IoT infrastructure vulnerability (15/09/2021)

https://global.roborock.com/pages/disclosure-security-vulnerability-on-tuya-iot-cloud

Disclosure: Security Vulnerability on Tuya IoT Cloud (Resolved)

Sep 15, 2021

Overview

Roborock vacuum cleaners (i.e. devices) connect to either Tuya IoT cloud or Roborock IoT cloud depending on the version of the firmware and Roborock app. For those devices connect to Tuya IoT cloud, the device side library uses an insecure random number generator when negotiating communication channel with the Tuya IoT cloud. This vulnerability affects a portion of Roborock product models globally. Those devices connected to Roborock IoT cloud are not affected by this vulnerability.

Threat

This issue undermines the security of the user data transmitted on the channel between the device and Tuya IoT cloud, including device info, cleaning data, maps, robot settings and customization options.

Affected Models

This issue affects the following products

- Roborock S6
- Roborock S5 Max
- Roborock S6 Pure

Statement

How have manufacturers of IoT / smart home devices addressed the increasing concerns of digital privacy and product security?

Rationale

Security is important!

Check things for yourself!

Proposal

Digital Privacy

Investigate the nature of network data (i.e. content, frequency, destination) from the Roborock S6, and how the data is used.

Product Security

Investigate potential security vulnerabilities of the Roborock S6, and assess the effectiveness of current security fortifications.

Literature Review

Existing Works and Papers

Literature Review

2017 - Dennis Giese

- Found ways to root the Mi Home Robotic Vacuum Cleaner and the Roborock S6
- <https://dontvacuum.me>
- Continued analysis on later Xiaomi (and derivative) vacuum cleaners

Dustcloud

TODO: OTHER PAPERS

Plan

Plan

- Research
- Get the Roborock S6 vacuum cleaner
- Acquisition and capture of network activity
- Find a way in (it runs Linux!)
- Image the system for offline analysis
- Reverse engineering and binary analysis of firmware and software
 - Look through binaries for security vulnerabilities and fortifications

Contingency

If we can't get into the device?

- Option 1 - Protocol analysis (network traffic)
 - i.e. Inspect the data and its nature
 - Content, Frequency, Destination
- Option 2 - Investigate the  Xiaomi Home smartphone application (used to communicate with the device)
 - i.e. Decompile the Android APK file and look for security vulnerabilities and fortifications

Future Plans

- See what the sensors see
- Circuit board decomposition
- Analyse the custom ADB binary serving the USB port

Research, Upskill, Tooling

Research areas as of initial exploration

- How to capture network activity without compromising my home network?
- Interfacing with JTAG / UART / Serial
- Linux filesystem / system forensics
- Learn the ARM Instruction Set (ISA)
 - Processor Modes, Protection Rings?
- Acquisition of hardware
 - Serial adapters?
 - Network switch?
 - etc...

Project Timeline

Thesis A

- Initial research and research environment setup
- Teardown and initial hands-on of Roborock S6

Thesis B + C

- Assessment of product security and privacy

Current Progress

Rolling Research

- No LAN-LAN packets???
- incomplete test - misconfigured packet capture setup

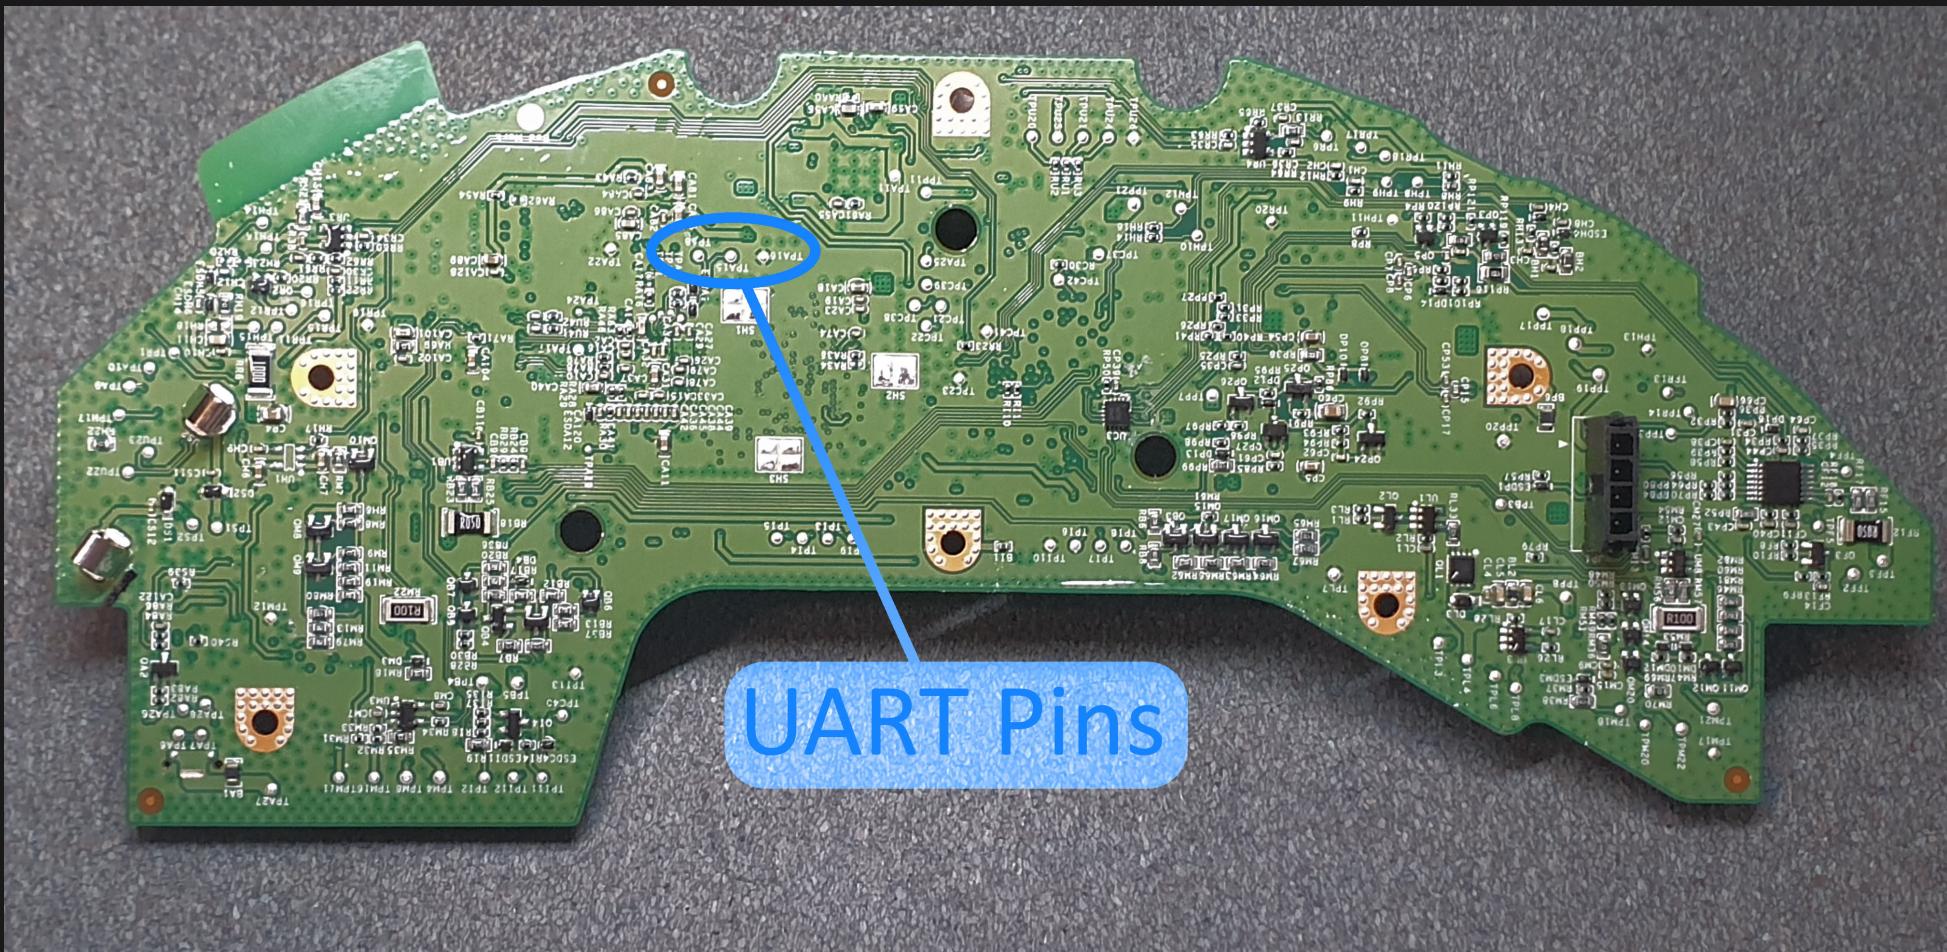

Teardown

Initial Breakdown and Pinout (where needed)

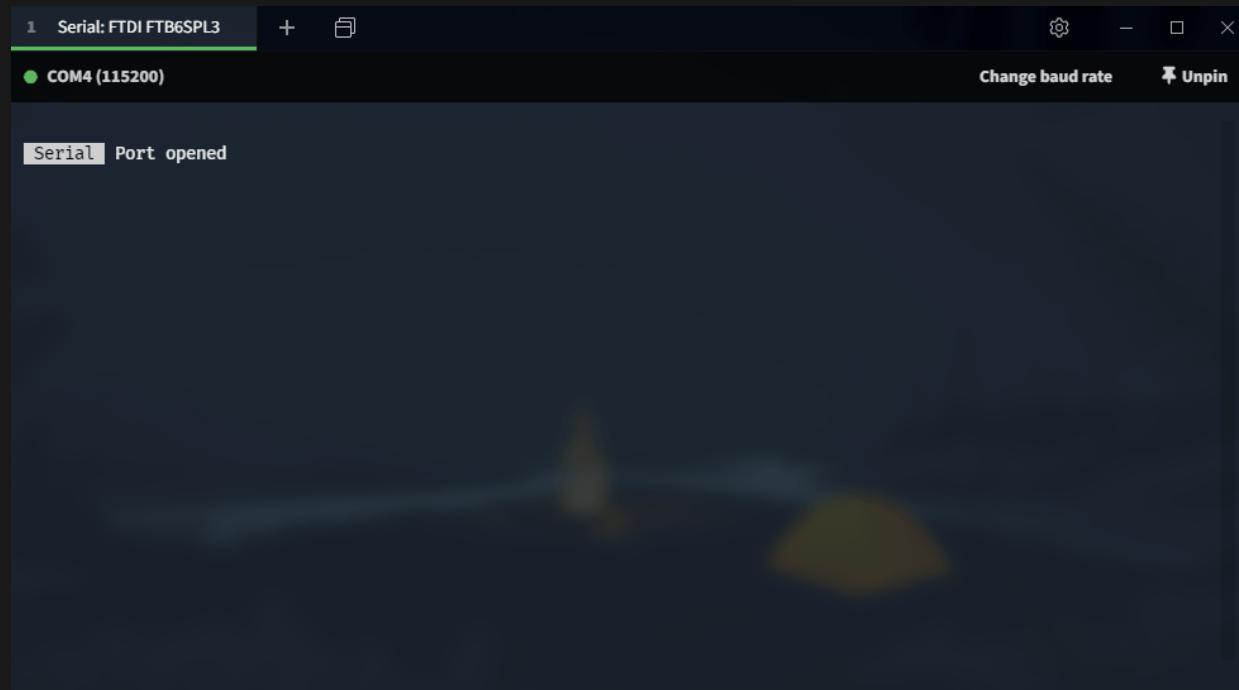

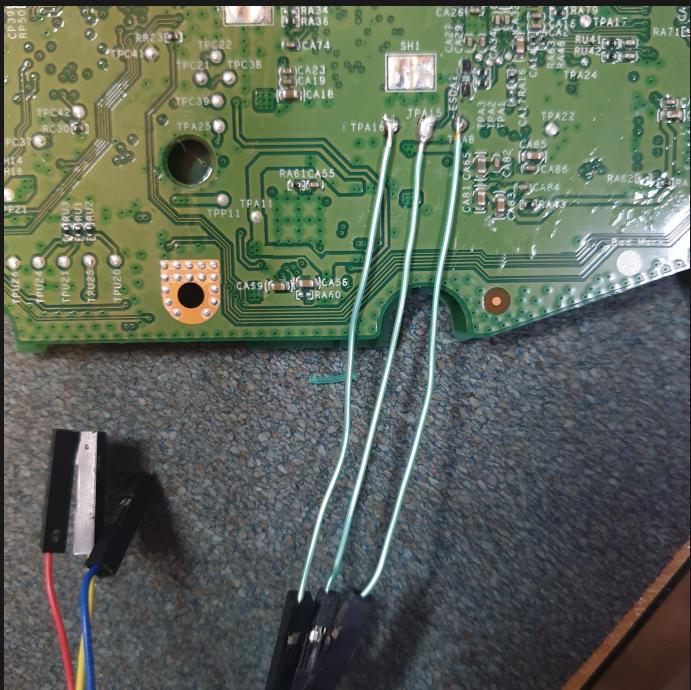

Identification of the UART pins

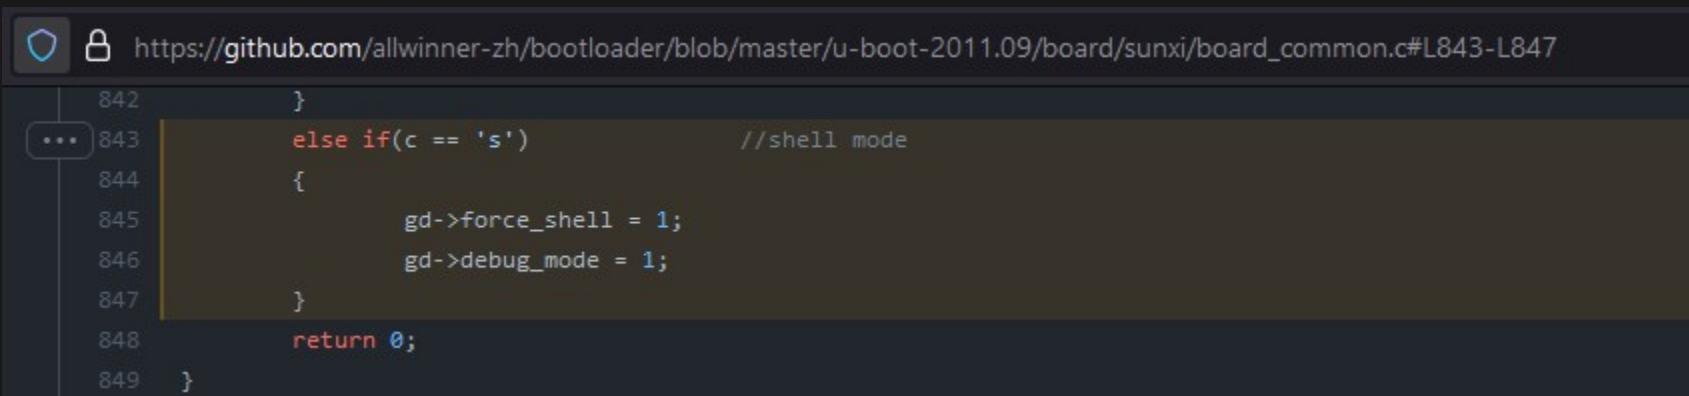

Serial Access

- Serial (baud=115200) gives us a shell!

Need a root password though...

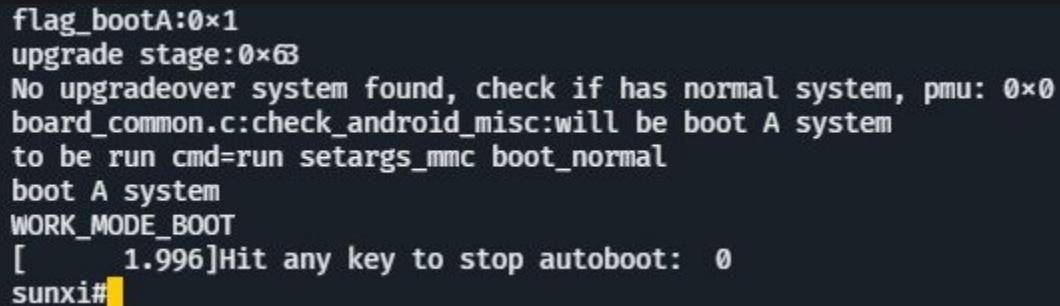

U-Boot Bootloader

A screenshot of a GitHub code viewer showing a portion of the `board_common.c` file from the `u-boot-2011.09` branch. The code is in C and handles shell mode. Lines 842 through 849 are shown:

```
842     }
843     else if(c == 's')           //shell mode
844     {
845         gd->force_shell = 1;
846         gd->debug_mode = 1;
847     }
848     return 0;
849 }
```

- Able to enter the bootloader shell if s is pressed during init

A screenshot of a terminal window showing the U-Boot boot log. It includes messages about upgrade stages, system checks, and boot mode settings, ending with a prompt to hit any key to stop autoboot.

```
flag_bootA:0x1
upgrade stage:0x3
No upgradeover system found, check if has normal system, pmu: 0x0
board_common.c:check_android_misc:will be boot A system
to be run cmd=run setargs_mmc boot_normal
boot A system
WORK_MODE_BOOT
[    1.996]Hit any key to stop autoboot:  0
sunxi#
```

Root!

```
sunxi#ext4load
ext4load - load binary file from a Ext4 filesystem

Usage:
ext4load <interface> <dev[:part]> [addr] [filename] [bytes]
    - load binary file 'filename' from 'dev' on 'interface'
      to address 'addr' from ext4 filesystem
sunxi#ext4load mmc 2:6 0 vinda
Loading file "vinda" from mmc device 2:6
16 bytes read
sunxi#md 0 4
00000000: 5b415243 51454346 54505042 525f5655    CRA[FCEQBPPTUV_R
```

```
rockrobo login: root
Password:
Welcome to Ubuntu 14.04.3 LTS (GNU/Linux 3.4.39 armv7l)

 * Documentation: https://help.ubuntu.com/
```

The programs included with the Ubuntu system are free software;
the exact distribution terms for each program are described in the
individual files in /usr/share/doc/*/*copyright.

Ubuntu comes with ABSOLUTELY NO WARRANTY, to the extent permitted by
applicable law.

```
root@rockrobo:~#
```

Next Steps

- Dump the firmware and begin RE / forensics
- Redo (and further investigate) live system analysis
 - i.e. Properly capture *all* network traffic

Any Questions?
